

Minorplanet™ vmi greenlight™ Performance Manager

Never before has such information been available with just one click

Performance manager is an additional module for the VMIgreenlight™ system, providing a powerful, interactive means of monitoring operational performance.

Performance manager brings enhanced functionality to the sophisticated VMIgreenlight™ fleet management system. It allows the fleet manager to view historical operational data and compare this to key performance indicators.

Benefits

- No set-up required
- Review historical performance of the whole fleet at a glance
- Simple indication of performance and compliance
- Easy identification of potential issues
- User defined measurement criteria against standard Key Performance Indicators (KPI's)
- Criteria can be altered quickly and easily - simple and intuitive to use
- Complements the reports to identify incidents or areas of concern
- Ability to set clear targets and measure compliance by exception
- Vehicle groups can be set up to enable KPI comparison

Key features

Performance manager is a brand new and powerful solution, designed to show historical performance of all vehicles. The fleet manager is able to select the criteria to show over and under performance that exactly meets the requirements of the organisation. Colour coded indicators are used to show the fleet manager, areas of good or bad performance or non compliance, immediately. Using performance manager, it is easy to highlight any issues with fleet performance and address them quickly.

Performance manager can be used to measure the distance travelled by each driver during a working day. This information can be used to show instantly how far each vehicle has travelled, helping with territory management, identifying actual hours worked and fuel costs. The fleet manager can then address any issues with those displaying the poorest performance.

Performance manager gives you more detailed information on each Key Performance Indicator (KPI), to help you identify strengths and highlight areas of weakness, and change accordingly. This information allows the user to identify the areas of poorest performance quickly. The fleet manager can use this information and 'drill down' to individual drivers or vehicles to investigate specific events thoroughly, and identify any driver behaviour issues efficiently.

The following KPIs are currently available within performance manager:

- Number of stops
- Distance travelled
- Hours worked (driving time)
- Average time at location
- Number of exceptions
- Speeding exceptions
- Idling exceptions
- Barred location exceptions
- Unknown location exceptions
